01 — ABOUT US

# Five people who studied this, then decided to build it.

Zynox is a small independent software studio of five engineers based in Abbottabad, Pakistan. We work directly with our clients to design, build, and ship high-performance products — from responsive web applications and cross-platform mobile apps to custom ERP/POS systems and immersive game experiences.

Our team is composed entirely of practitioners — no project managers, no middlemen. Every sprint is run directly by the engineers who write the code. We believe the best products are built by teams that own the entire stack, from database schema to deployment pipeline.

## 0%

### Outcome-First

We measure success by what ships, not by hours tracked.

## 100%

### Full Ownership

Engineers own features end-to-end, schema to deployment.

## 100%

### Transparent

Clients have direct access to progress and decisions.

02 — OUR SERVICES

# What we build.

## WEB

### Web Development

React, Next.js, TypeScript and Framer Motion-powered web platforms — built for speed, SEO, and premium aesthetics.

## MOBILE

### Mobile Applications

Cross-platform iOS and Android apps with Flutter & Dart, including real-time sync, offline-first support, and BLE/OBD integrations.

## CUSTOM

### Custom Software

Bespoke ERP, POS, and inventory management systems tailored to logistics, retail, and supply-chain clients.

## GAMES

### Game Development

Immersive Unity-based 3D experiences and game prototypes built with modular architecture and high-performance rendering.

## 03 — OUR TEAM

## Built by practitioners.

Our team of five is made up entirely of specialists. Each member owns a core domain, while contributing across the full stack. We do not have project managers or account handlers — when you work with Zynox, you work directly with the people who write the code.

**Hashim Khan**  
Lead · Frontend & Systems

Next.js · TypeScript · Architecture

**Ali Ahmed**  
Mobile Engineering Lead

Flutter · Dart · Firebase

**M. Raza**  
Backend & API Systems

Node.js · PostgreSQL · Docker

**Faisal Q.**  
Game & 3D Development

Unity · C# · Blender

**Zain T.**  
UI Design & Frontend

Figma · CSS · Framer Motion

## 04 — HOW WE WORK

## Hybrid. Flexible. Outcome-driven.

*"We work in a flexible hybrid model, combining remote collaboration with in-person sessions for planning, innovation, and client meetings. Our focus is on outcomes, communication, and giving our team the flexibility to do their best work."*

**+! No Micromanagement**

Define outcomes, set timelines, trust the team to execute.

**+! Radical Transparency**

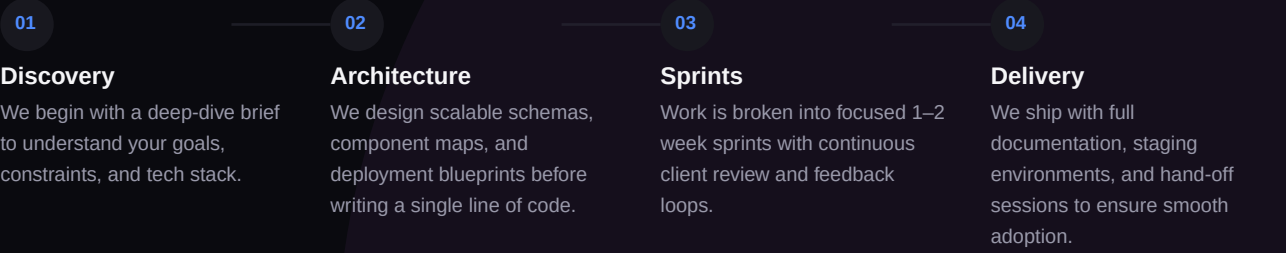

Every client has visibility on sprint progress and blockers.

**+! Continuous Learning**

Engineers are given time to explore, prototype, and publish.

05 — OUR PROCESS

# How we deliver projects.

06 — TECH STACK

## Built with modern tools.

Next.js
